

Yousuf Sultan

Lead Data Analyst | Analytics & BI Manager | Data-Driven Decision Leader

Hyderabad, India | Open to Remote & Hyderabad Hybrid | ysultankpg@gmail.com | +91 9739001239 | linkedin.com/in/yousufkpg | ysultankpg.github.io

PROFESSIONAL SUMMARY

Lead Data Analyst with 13+ years of experience building enterprise-scale analytics, BI, and reporting platforms across technology, geospatial, and healthcare domains. Currently driving analytics strategy for Apple Maps (via Cognizant), managing a team of 8, and delivering Snowflake/Tableau solutions that process 10M+ records and support 50+ stakeholders. Beyond dashboards, I build the automation layer that keeps analytics operations running -- Python-based pipeline monitoring, auto-escalation to Slack/email/Radar, and ticket-hygiene bots that eliminate manual triage. Proven track record of cutting reporting effort by 15+ hours/week, boosting dashboard performance by 50%, and leading legacy-to-cloud data migrations.

KEY ACHIEVEMENTS

8 Analysts led & mentored | 20+ Executive dashboards owned | 50+ Stakeholders supported | 10M+ Records processed (Snowflake) | 15+ Legacy pipelines migrated | 50% Dashboard performance gain | 15 hrs Reporting effort saved/week | 30% Less data validation effort | 31+ Pipelines under auto-monitoring

TECHNICAL SKILLS

Analytics & Visualization: Tableau, Power BI, SSRS, SSAS

Data Platforms: Snowflake, SQL Server, Hive

Programming & Querying: SQL, Python, Spark (Scala)

Data Engineering: ETL Development, SSIS, Data Modeling, Data Warehousing

Automation & Integration: Python scripting, Slack/Email API, Kerberos/SPNego auth, Radar API, Harbor/launchd scheduling

Leadership & Delivery: Team Management, Hiring & Interviewing, Stakeholder Management, Project Planning

PROFESSIONAL EXPERIENCE

Lead Data Analyst -- Cognizant (Client: Apple)

May 2022 -- Present

Apple Maps Analytics, Hyderabad, India

- Lead analytics strategy for Apple Maps quality, productivity, throughput, and automation programs, serving as the primary analytics advisor to Product, Engineering, and Program leadership.
- Manage, mentor, and grow a team of 8 analysts, owning hiring -- including conducting technical interviews and driving analytics hiring decisions.
- Architect and scale Snowflake-based analytics platforms processing 10M+ records, partnering with cross-functional stakeholders to define KPIs and reporting strategy.
- Led migration of 15+ legacy data pipelines (Scala-based) to Snowflake, powering 20+ dashboards used by 50+ stakeholders.
- Automated manual reporting workflows, saving ~15 hours/week and reducing data validation effort by 30%.
- Improved dashboard refresh performance by 50% through Snowflake workload optimization and query tuning.
- Own and maintain 20+ Tableau dashboards spanning Automation Insights, Productivity, Throughput, Workforce Efficiency, and Operational Performance.

Automation & Tooling (Python) [Self-Initiated]

Production-grade internal tooling built to eliminate manual monitoring, triage, and data discovery

- Pipeline Monitor & Escalation System: Production Python system (~2800 lines) monitoring 31+ data pipelines across 5 program areas, running 13x/day (hourly 07:30 AM–07:30 PM IST). On critical failure, auto-creates a P1 Radar ticket via REST API with mTLS, emails stakeholders, and posts Slack alerts with the responsible owner auto-@mentioned. Features progressive status digest (only changed pipelines shown after first run), Arches error extraction (per-action root-cause errors with direct job links), recovery detection, no-change digest suppression, weekend failures-only mode, and Snowflake-backed state persistence. Deployed on Harbor (cloud) with config externalized in Snowflake — adding a pipeline requires zero code changes.
- Radar Ticket Hygiene Bot: Scans open tickets for missing required fields and auto-routes targeted email + Slack notifications to the correct owner -- removing manual audit entirely.
- SQL Table Lineage Explorer: Traces full upstream and downstream table lineage from SQL source code. Parses every SQL file into a dependency graph, runs BFS in both directions, rendered as a searchable collapsible tree.
- Self-Updating Data Dictionary Generator: Browser-based tool that turns any SQL folder into a browsable, self-updating data dictionary with optional live Snowflake enrichment. Security-first -- credentials never touch the browser.
- GitAnatomy -- GitHub Repository Analyzer (ysultankpg.github.io/gitanatomy): A live, zero-dependency web app that dissects any GitHub repository -- structure visualization, 11-point health scoring, and auto-generated data dictionary from SQL/Prisma/TypeORM source files. Supports github.com and GitHub Enterprise.

- CascadeTrigger -- Pipeline Dependency Orchestrator: Config-driven orchestration system that watches upstream pipelines and triggers downstream jobs when all dependencies succeed. Continuous watch mode, multi-upstream dependency resolution, Slack notifications with execution links, database-backed audit logging, and API fallback. Zero code changes to add/remove pipelines.
- Integrated with Apple's internal Kerberos/SPNego authentication for secure, credential-free automation against Radar and internal APIs. Deployed all tools as scheduled, self-monitoring background jobs with state persistence.

Senior Software Engineer -- IQVIA

May 2019 -- May 2022

Healthcare Analytics Programs

- Led analytics solutions for enterprise reporting, translating business needs into scalable data solutions.
- Owned maintenance and enhancement of 12+ BI applications across Tableau, Power BI, and SSRS.
- Mentored a team of 5 analysts/developers. Recognized with IQVIA IMPACT Ovation Award (2022).

Application Development Specialist -- IQVIA

Mar 2016 -- Apr 2019

Healthcare Analytics Programs

- Designed and delivered Tableau and SSIS reports for multiple client analytics requirements.
- Built and optimized ETL pipelines, reducing processing time by ~30%.
- Recognized with IQVIA Spot Award (2016). Converted from contract to full-time based on performance.

Database Developer -- EsyaSoft Technologies

May 2015 -- Mar 2016

Bengaluru

- Spearheaded design of 10 project modules, optimizing database architecture for 30% faster queries.
- Crafted PostgreSQL functions and implemented ETL using Talend Data Integration.

MSBI Developer -- Aroha Technologies

May 2013 -- Apr 2015

Bangalore

- Developed new database architecture, boosting performance by 10%.
- Enhanced ETL processes, accelerating execution time by 50%.

EDUCATION

B.Sc. Information Technology -- Punjab Technical University

CERTIFICATIONS

- Snowflake -- The Complete Masterclass
- Apache Spark with Scala
- Microsoft MTA: Database Fundamentals
- Tableau Training & Certification

AWARDS

- IQVIA IMPACT Program -- Ovation Award (2022)
- IQVIA Spot Award (2016)
